1564.

A new Almanach

and Prognostication, seruynge the yere of Christ M.D.LX.IIII. faithfully calculated for the longitude of London, and pole articke of the same. By VV. Cunyngham Doctour in Physicke.

PRINTED AT LONdon by Rouland Hall, dvvellinge in Gutter Lane at the signe of the halfe Egle and the Key.

1564.

A brefe declaration and rehearsall of such thinges as are conteyned in this presente Almanach .1564. beynge leepe yeare.

The Golden number, vii.
The Circle of the Sunne. v.
The Dominicall letters. B.A.
Betwerte Christmas and shrouetyde seuen wekes and one daye.
Ashwedensday, the xvi. of Februarie.
Easter daye, the seconde of Aprill.
Rogation dayes beginne the .vii. of Maye.
Thascension daye the .xi. of Maye.
Whytsondaye the .xxi. of Maye.
The vertue attractiue where as nede requireth is not a litle increased if you minister medicines conuenient for the same at such time as the moone is in Ariete, Leone, Sagittario.
In like maner the faculty retentiue: she hauing her course in these signes, Tauro, virgine, Capricor.
Also to minister digestiues, you may aptly do it whē as the moone is in Geminis, Libra or Aquario.
And the vertue expulsiue is augmented yf you giue purgine medicines in Cancro, Scorpione or Piscibus

But

But as touching conuenient tymes for Phlebotomie and letting of bloude yf great necessitie doth not contrary require, (for then the indication taken of the tyme, is not so much to be regarded) is in thys sorte. You shall not open a vayne when there is any yll aspect of one planet to another: neither when as the moone is founde in the Lion: neither shall you open a vayne in that parte whereas the moone is found that season. And touching the diuersitie of ỳ tymes taken according to the temperatures & complexions: they vse for colorike constitutions Cancro Scorpione or Piscibus. For flegmatike, Ariete or Sagittario, like as for melancholike complexion the signes conuenient are founde Libra & Aquarius. But for the playner and easier vnderstandyng how the moone in euery signe gouerneth the partes of mans body you shall reade these fewe verses folowyng: and marke the picture of this Anotomie.

The verſes.

Aries the heade, Taurus the necke guide:
Gemini armes, Cancer ſtomake and breaſt.
Leo the harte: Virgo the belly ſyde:
Raynes, nauel and buttockes, Libra loue beſt.
Scorpius kepth Secrettes ſure in his cheſt:
Sagittarius theis, the Goate knees doe craue:
Legges Aquarie: Piſces the feet will haue.

You shall moreouer for the firste daye of euery month fynde the risynge and settinge of the sunne. And when he entreth anye of the celestiall sygnes in the Zodiake.

Also the signe, digrée, & minut in which the moone is euery daye at noone: her motion beinge reduced to the meridian of London. In like maner are the changies, full and quarters, of the Moone.

There is further set out the beginning and ends of the tearmes and other profitable thinges whiche in reading you shall easely fynde.

There shall appeare neither Eclipse of the Sunne or Moone in this oure Horizont this yere of Christ our Sauiour. M.D.LX.IIII. But the cruell and horrible effectes of the two Eclipses whiche were the laste yeare in June and July shall this yere appeare and be felt: god for his mercies sake (who hath the heauens in his hand and gouernance) refraine & breake their force: and and withdraw his vengeance iustly of vs deserued: or elles woo will fal on the inhabitantes and dwellers on the yearth.

Ianuarie hath. xxxj. dayes. Sunne riseth at,

A PROGNOSTI-

CATION FOR THE YEARE
of our redemption. 1564. in whyche
manifestly set out the vengeaunce of God,
to fall on the inhabitantes of Europe for
their vyle and abhominable lyuynge, so farre
as by natural disposition of the celestiall bo-
dyes. may be gathered, and for that cause pu-
blished as a warnyng vnto all.

By Vvilliam Cunyngham,
Doctor in Phisicke.

(**)

PRINTED AT LONDON
by Rouland Hall, dwelling in Gutter
lane, at the signe of the halfe
Egle and the Keye.

1563.

Of the Eclipse of the sonne vvhiche vvas 1563. 20 day of Iune: vvhose effecte shall take place this yeare 1564. and ende 1566.

Anno domini 1563. 20 of Iune there was a ferefull Eclipse of the sonne, he then passinge the seuenth parte and. xxxiiii. minutes of Cancer not farre from the Dracons tayle, he was darknid. viii. pointes. xxxviii. minutes the beganne to be shadowid of the moone at. ij. of clocke, xlviii. minutes after noone, and was in his greatest darknes at. iii. of the clocke. 48. minutes, and so continued in his eclypse vntill. iiii. of the clocke. 48. minutes. at the mydtyme of this eclipse the heauēs ware thus situatyd. In the easte angle, was the xvi. parte of the venomous scorpion, the second house the. xi. of sagittarius, the. iii. house, the. xx. of Capricorne in whiche also is the dracons heade: the. iiii. house the. iii. of Pisces, the v. house, the. v digre of Aries, Marslorde of it and of the ascendent, is also in the. v. house the. vi house, the xxvi. of Aries, in the west angle 16. of Taurus, Venus in the same house in the. xxv. degre of Taurus: the 8. house the. xi. of Gemini the ninthe house, the xx. of Cancer, Saturne in the same house in the. xx. degre of Cancer, the dracons tayle, and Mercury in the 17. degre of the same signe. Iupiter in the xiiii.

degre of Cancer, the sonne & moone in the. 7. degre 34. minutes of Cancer, the .x. house the. iii. of Virgo, the .xi. house the. v. of Libra, the .12. house the. 26. of Libra. I fynde in this Eclipse, Jupiter to be the lorde and gouernour, whome as God hath created to the great comforte of al lyuing thinges, so laboureth he to kepe backe the great perilles and dangers whiche are mynacyd: but Saturne and Mars, starres created to the punyshing of wickednes and sinne doth muche diminishe Jupiters poure, the one being exalted aboue Jupiter, and the place Eclipsyd: the other beholding both theis places with his enuious quartyll beames, and that partially. wherefore there is thretnyd by theis heauenly bodyes more misery and troubles then maye safely be expressed. I speke not of the pestilence who begonne the last yeare, but now like an insaciable monstre wyll euery where deuoure bothe man and beast. oh the blode, the blod, of godes martyrs shed in London and through England, for the testimonies of Christe, cryeth for vengeaunce: oh the goodnes of God that warnyth vs by the heauens, his ministring Angels. Oh the wretchyd and dul nature of man that conteneth theis warnings and fatherly admonishynge: let me say and cry also vnto all you that read theis my doynges, Corrigite vos, instat enim cœleste regnum. For what els dothe the conglomoration and mustringe of so many planetes in the place of the Eclypse thretten but warre, discention, malice, faire countenaunce

and

and falſe trayterous hartes, and ſpecially amonge the Popes generation, aſwel ſpirituall as temporal, alſo famine and greate tempeſtes on the Seas, by reaſon of whiche ſhal folowe greate ſhypwracke and troubles to the trauaylours on the Seas. The effecte of this Eclipſe ſhall beginne the xxvi. of March. 1564. & ſhal ende the. ix. day of Apryl 1566. Thoſe alſo who in ther natiuities haue the place of the ſonne, moone, aſcendent, midheauen or ſors foꝛtune in the vii. degre of Aries, Cancer, Libra and Capricorne: ſhalbe mooſt ſubiecte to the effectes abouesaide. God change his threning into bleſſinge, and torne vs vnto him, for ſo ſhall we be torned, &c.

Of the Eclipſe of the Moone.

The Eclipſe of the moone was the v. of July 1563 at viii. of the clocke after noone, ſhe being in the 21. degre. 58 mynutes of Capricorne not farre from the dracons heade, ſhe was Eclipſyd. xi. poinctes 46. mynutes, ſhe beganne firſt to be darkenyd at vi. of the clocke xx. mynutes after noone; and continued in her Eclipſe vntyll. ix. of the clocke 40. mynutes at night of the effectes of this Eclipſe I ſhal not neede to wꝛight ſeing the operation ſhall take effecte 26. Auguſt. 1563. and ſhall ende the iiij. daye of december the ſame yeare.

A iij. of the

Of the 4. quarters of the yeare, and first of Vvinter.

Vvynter taketh his begynnyng whan as the ſonne cometh to his hiemal tropicke boynge the firſt mynute of capricorne which his the .12. day of december. 1563. in the preuention goinge before Saturne and Mars be both anguler, Saturne lord of the .vi. houſe in the aſcendent and Mars lord of .x. houſe in the ſame place, wherefore I finde this quarter to be gyuen to rayne, thunder vehemēt coulde, with windes at the ſouth & ſouth weſt, ſo that after the mynde of Hippocrates in hys booke intituled. De aëre aquis & regionibus theis ſickenes ſhal folow mulieres quæ vterum geſtāt, & partus ipſis ad ver inſtat, abortum facturas veriſimile eſt, quæ vero peperierint, impotentes aç morboſos parere. ita vt aut ſtatim pareant aut tenues, imbecilli, & morboſi viuant: reliquis vero diſſenterias, & lippitudines ſiccas, aliquib, defluxiones a capite in pulmonem ſemibus autem propter raritatem, & eliquationem venarum, ita vt nonnulli phrenites de ſubito pereant, alii vero dextra aut ſiniſtra parte reſoluantur. &c. greate ſhalbe the wyndes of this quarter, Mars anguler in the houſe of regall poure and imperie thurſteth to bath his ſworde in blode, there ſhalbe greate tempeſtes on the ſeas, neuer leſſe loue or more licentious lyuynge

uing iam inter ſpirituali dignitate fulgentes, quàm inter plebeos & infimæ ſortis homines. God hould his holy hande ouer vs.

Of the ſpring the ſecond part of the yeare.

The ſprynge tyme after the myndes of all Aſtrologians aſwell olde as new taketh his beginnyng whan as the ſonne entreth the firſt mynut of Aries in the equinoctial, whiche is this yeare of Chriſt oure ſauiour. 1564. ther. daye of Marche in the preuention goinge before: Saturne & Jupiter are in the Weſt angle Occidentall of the ſonne. Theis after the mynde of Ptolemæus ſignifieth this quarter to be raynye with thunder lightning vehement and ſodayne freirs windes from the North Eaſte, ſo that the fruites of the yearth ſhall putrifie and plentie ſhalbe of vnprofitable weedes, Neſcio præterea quid mali ſuperiorum ſynodus illa, in cardine Occidentali minatur quantum ad hoſtium in fultus, & apertiſsimos inimicos. The infirmities ſpringyng this quarter through the diſtemperance of the ayre are febres longæ profluuia, putredines, morbi comitiales, apoplixia, & anginæ: for ſo affirmyth Hippocrates. 3. Aphor. 16. whan as ther is multitude of rayne.

Of Somer the third part of the yeare.

SOmer begynneth whan as the sonne hath made his longest progresse towarde Pole arctike, and entreth the first minute of Cancer, which shalbe this yeare 1564. the. xi. day of June. In the coniunction going before: Saturne, Iupiter, Mars, and Venus are in the. vij. house conioyned in Leone all occidental of the sonne. Therfore the blod in colericke persons shalbe sterid to mischiefe through the heate of this quarter: & so muche the rather because olde cancryd Saturne placyth hys chariote in the noble Lyon the house of Sol, besides the great heate ther shalbe many shoures, lightning, thunder and great wyndes comonly at the North. This will bringe sharpe and perilous infirmities causones febres acutas, continuas, tertianas, vomitus, alui profluuia, alias Chamæleontiasin, oris vlcerationes, genitalium putredines, quartanas, &c. The fruites of this yeare shall be subiecte to putrifaction becaus of the rayne mixid with heat this quarter.

Of Autumne the last parte of the yeare.

AUtumne shall beginne this yeare of Christe our sauiour 1564. the. xiij. daye of Septēber, This quarter shalbe altogether raynie, haile, snowe, cloudye wether, with pestilenciall South windes, bringinge forthe quartayne and erratike

feuers, obstructions of the splene dropsie, strengurie sciatica articulorum cruciatus, difficultatem & leuitatem intestinorum, anginam, asthma, epilepsiã furores, melancholiam & Chamæleontiasin, yea this autumne beinge mother of sickncs generallye, shall this yeare shewe hyr nature and muche vere, the bodye of men . the moysture also of this season shall muche hurte grapes and fruites of the yearth. Therfore let vs leaue the narrow speing the faultes of other, and loke into oure selues with wyllynge harte to amende oure wycked liues, and not tarrye whyl other doe gyue vs an example: for els sure he hath prepared sickncs, samyne, and sworde, both to destroye the fruites of the yearth oure comforte: and also vs whiche so abuse his great longanimitie and fatherlye soferyng: Therfore slepe no longer in synne (deare reader for the blud of Jesus) but awake awake, for it is high tyme, and thinke that I doe speake to the whatsoeuer thou arte, for thou arte wholy synne & canst of thy selfe doe nothinge but sinne. Therfore flatter not thy selfe, but spedely turne to God, lest he doth both destroye thee in this worlde, and forsake thee in the worlde to com, repent, repent, God grant vs all to repent.

The diſpoſition of the

ayer the. xii. monethes, vvith the daye,
